The Coal Fields of Manitoba, Saskatchewan, Alberta, and Eastern British Columbia Volume 1035

By Geological Survey of Canada

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: . ring, embracing an exposure of limestone forming Moose mountain. The beds are much thinner than within the ranges, and show an evident tendency toward a loss of coal also. Two seams of coal have been opened on the east side of the mountain, of 7 and 8 feet in thickness, respectively. In each of the seams the character continues to be of good grade steam coal, as the appended analyses will show. The formation is cut by several streams, the valleys of which give access to the seams, and a great deal of this coal will be mined. Further prospecting in this area is reported, and a thick seam of 20 feet added to the above coal content. The area is, roughly speaking, twentyfive miles long; and as it encircles the mountain, an average width for this length may be taken as one mile of...
